Commit: `4bad627`

1 Table of contents

Deliverable	Page or repository path
1 — Proposal follow-up	p. 3
2 — User interviews	p. 4
3 — Evidence log	docs/evidence/evidence-log.md
4 — Backlog	docs/backlog.md
5 — Design docs	docs/design/S-1.md, docs/design/S-7.md
6e — Test output	p. 9
7 — Traceability matrix	p. 10

2 Deliverable 1 — Proposal follow-up

Each item below is from the proposal approval feedback; the response says what changed and where.

Feedback item	Response
Target user. “Students 13 to 25” is a market, not a role. Narrow it, preferably to adults only; say what these users do today and which team member can reach one.	Partially addressed. The backlog now uses three roles — audio creator, audio listener, audio sharer — and the stories are written in those terms (`docs/backlog.md` §4a). The proposal’s 13–25 age statement has not been narrowed, and the privacy/moderation obligation for minors remains open.
Logic. Liking, commenting and following are mostly storing data. Add at least one capability with real rules.	Addressed. S-7 adds clip validation with `SUPPORTED_AUDIO_FORMATS` and `MAX_CLIP_DURATION`, typed rejection errors, and an invariant that every accepted clip has a permitted format and a duration ≤ the configured maximum (`docs/design/S-7.md` §§4–6; AC-7). No moderation or reporting capability was added.
Non-goals and cut line. Give a reason for each non-goal; replace “cost is prohibitively expensive” with a measurable trigger.	Not changed. The proposal’s three non-goals still carry no cost/risk/dependency reason, and the cut-line note still reads “cost is prohibitively expensive”. The deferred stories in `docs/backlog.md` §4e do carry a reason each.
Success measures. Say how each is measured and what counts as a miss.	Not changed. “Noticeably longer than one second” and “90% uptime” still have no measurement method in the proposal.
Right size. Section 5 repeated the scope checks; argue why the project is the right size for three people in one semester.	Not changed. The proposal’s section 5 still repeats the scope checks.
Team record and interviews. Add the meeting record, ideas considered and working agreement; rewrite interview questions 2, 3 and 5 as specific past events.	Partially addressed. The repository README records the three roles (Joshua George — backend and auth; Ben Shuster — frontend; Luke Hill — DevOps and QA). No meeting record or working agreement exists. Five interview questions ask about a specific past event (Q1, Q4, Q6, Q11, Q12 in §2a); questions 2, 3 and 5 remain preference questions and were not rewritten.

3 Deliverable 2 — User interviews

3.1 2a. Interview questions

1. Describe the last time you tried to find an audio clip.
2. What is your preferred method (audio, video, game, etc) of consuming content? Why?
3. Tell us about some of the most used audio/music/podcast apps and sites you use. Why do you use them?
4. What did you do the last time you wanted to share a short audio clip with a friend? Was it a good experience?
5. Do you have a preferred length for the content you consume? Why?
6. When was the last time you sent an audio / voice clip to a friend?
7. What was the contents?
8. Why did you choose to send an audio clip?
9. Was it an individual or a group chat?
10. Do you have any specific types of clips that you prefer?
11. Have you sent voice notes or audio clips when using a standard messaging app like IMessage?
12. In the past when you have decided not to send an audio clip, why did you not choose to do so?
13. Who else should we talk to?

3.2 2b. Interviews and participation

Four interviews with real people. Every team member took part in at least one.

ID	Interviewee role	Date	Team members
INT-01	audio-platform user (role not recorded)	not recorded	Ben Shuster
INT-02	user-research participant	not recorded in notes	Ben Shuster
INT-03	student interviewee	not recorded	Joshua George
INT-04	two participants, A and B	2026-10-31	Luke Hill

3.3 2c. Raw notes and paragraph IDs

Paragraph IDs follow `INT-nn:Pnn`. Full notes are in the repository:

Interview	Path	Paragraphs
INT-01	docs/evidence/drive/INT-01-ben-notes.txt	27
INT-02	docs/evidence/drive/INT-02-ben-notes.txt	112 recorded, 99 parsed
INT-03	docs/evidence/drive/INT-03-joshua-notes.txt	12
INT-04	docs/evidence/transcript/interview_transcript.md + INT-04-paragraph-map.md	69

INT-02 paragraphs P100–P112 did not parse; no evidence entry cites them (risk recorded in the ledger).

3.4 2d. Compliments and predictions

Nothing on this list is evidence and nothing here is cited by a story or criterion.

ID	Para	Type	Quote	Source
C-1	P65	Compliment	“Yeah. Interesting.”	INT-04:P65
PR-1	P21	Prediction — counterfactual willingness	“I would have sent one last week if I knew how, but I sent the whole song.”	INT-04:P21
PR-2	P29	Prediction — conditional willingness	“Maybe if they were going to sing happy birthday to them.”	INT-04:P29

PR-3	P33	Prediction — willingness, with a stated blocker	“It wouldn’t stop me. What would stop me was I didn’t want the person to… I don’t know what environment they’re in, that other people can hear.”	INT-04:P33
PR-4	P55	Prediction — third-party trend	“I could see where it would be coming out more now”	INT-04:P55
PR-5	P57	Prediction — stated plan	“I can hide that in the ceiling or something, or somewhere, and then it would play from my computer on a delay.”	INT-04:P57
PR-6	P67	Prediction — product shape	“they’re all going to be accompanied by an image to find it, I guess, or just text.”	INT-04:P67
PR-7	P68	Prediction — product shape (negative)	“it would be kind of like a gimmicky version of Spotify.”	INT-04:P68

3.5 2e–2f. AI summaries and synthetic users

No AI interview summary was used, and no synthetic-user session was run.

3.6 Most useful finding

The interviews did not show a general appetite for sending audio clips: INT-01 has never sent a voice recording (E-5) and finds receiving one annoying (E-6); INT-02’s attempt to share a Reel failed at the embedding step (E-9); INT-04’s participants described voice notes only when typing is inconvenient. That shaped the cut line: the seven final stories are playback, recording, upload, preview, re-record, link sharing and duration, while titles, listening history and trimming were deferred (`docs/backlog.md` §4e).

4 Deliverable 3 — Evidence log

Eighteen E entries, four A entries and three Q entries across four interviews, each with a paragraph source, status and owner. Full table: `docs/evidence/evidence-log.md`.

5 Deliverable 4 — Backlog

Ten Connextra stories with evidence traces, INVEST checks, acceptance criteria and a ranked cut line; seven stories are in the final release and three are deferred. Full tables: `docs/backlog.md`.

6 Deliverable 5 — Design docs

Two design docs, each with the nine sections: `docs/design/S-1.md` (record, AC-1) and `docs/design/S-7.md` (upload, AC-7). S-7 carries the rule requirement: `SUPPORTED_AUDIO_FORMATS`, `MAX_CLIP_DURATION`, typed rejection errors, and the invariant that every accepted clip has a permitted format and a duration at or below the maximum. S-1's tests are `test_ac1_record_and_stop_displays_playback`; S-7's are `test_ac7_valid_audio_upload_displays_playback`.

7 Deliverable 6e — Test output

Command, from a fresh clone: `cd frontend && npm install && npx playwright install chromium && npm test`. The backend has no tests at this commit (`backend/` does not exist).

```
  -  2 [chromium] › tests/ac-07-upload.spec.ts:26:1 › test_ac7_valid_audio_upload_displays_playback
  ✓  1 [chromium] › tests/ac-01-record.spec.ts:39:1 › test_ac1_record_and_stop_displays_playback (352ms)

  1 skipped
  1 passed (1.1s)
```

The skipped test is AC-7 for S-7, the story not built in this milestone; its reason names AC-7.

8 Deliverable 7 — Traceability matrix

Evidence ID	Story	AC	Test name
E-12, E-13	S-1	AC-1	test_ac1_record_and_stop_displays_playback
E-12, E-18	S-2	AC-2	Not yet written
E-14, E-15	S-3	AC-3	Not yet written
E-14, E-15	S-4	AC-4	Not yet written
E-9, E-10, E-18, A-3	S-5	AC-5	Not yet written
E-3, E-4, E-11	S-6	AC-6	Not yet written
E-8, E-16, A-4	S-7	AC-7	test_ac7_valid_audio_upload_displays_playback
A-2	S-8	AC-8	Not yet written
A-1, E-16, A-4	S-9	AC-9	Not yet written
E-2, A-2	S-10	AC-10	Not yet written
